ElectroQ AI

Your All-in-One Intelligent Trades Assistant: Plumbing, Electrical & Software Engineering

8 Billion Parameters | Open Access | Community Driven

Model Specifications & Architecture

ElectroQ AI is a highly capable multi-domain assistant optimized for technical guidance, diagnostic troubleshooting, and code optimization. Built upon an advanced **8 Billion Parameter (8B) neural network architecture**, it balances powerful reasoning with efficient inference capabilities.

Model Size	**8 Billion Parameters (8B)**
Core Domains	Electrical Engineering, Plumbing Systems, Software Development
Access Model	100% Free Public Release (No Subscription Fee Required)
Deployment Architecture	Supabase Auth + Python Flask Backend + Hugging Face / Render

Key Capabilities & Features

- **Electrical Diagnostics:** Provides initial troubleshooting steps, wiring code guidance, and basic circuit safety checks.
- **Plumbing Assistance:** Answers queries regarding piping layouts, fixture installations, flow dynamics, and maintenance.
- **Developer & Code Optimization:** Assists with full-stack web development, API integration, and debugging routines.

Open Access & Technical Considerations

ElectroQ AI is published completely free of charge to serve the developer and trades community. Please keep the following operational nuances in mind:

Model Accuracy & Limitations

Because this model is freely hosted and fine-tuned for versatile tasks, it may occasionally contain errors or output inaccuracies. Despite minor flaws, the model performs with **100% dedication to technical problem-solving**. Always verify critical electrical or structural work with certified professionals.

Server Hibernation & Best Usage Times

To maintain free operations, the underlying backend server enters **sleep mode after 15 minutes of inactivity**.

• **First Connection Delay:** Waking up the server from sleep may take extra loading time.
• **Optimal Low-Traffic Hours:** Response times are fastest starting around **4:00 AM**. After this window, as global traffic increases, initial response latency will decrease as the server stays fully warm and active.

Darshan N Lal

Lead AI/ML Engineer (13 Years Old)

Creator & Architect behind ElectroQ AI. Pioneering accessible, multi-domain AI tools designed to support tradespeople, engineers, and developers worldwide.
